

One-shot Classical Decoder Failure Rate

Teresa del Aguila Ferrandis

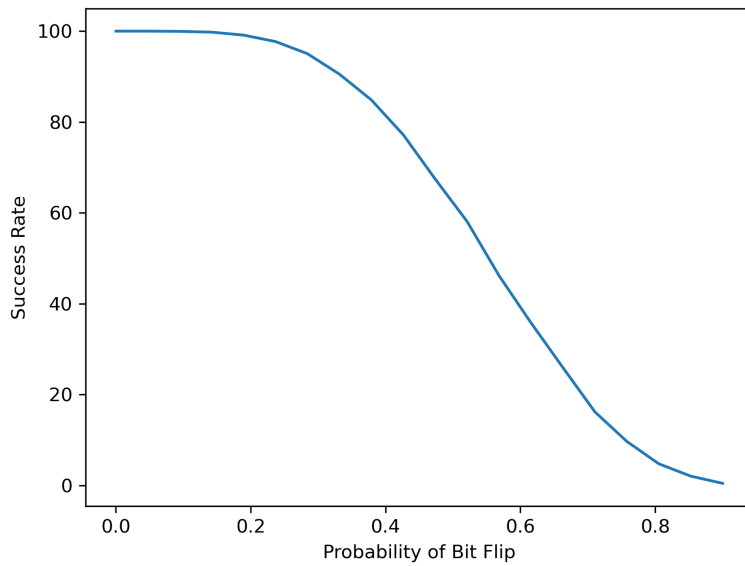

N = length of string of bits (i.e. $N = 5$ means we start out with $[0,0,0,0,0]$)

In each of these I test 20 probabilities from $p_i = 0.0001$ to $p_i = 0.9$ and average number of successful predictions over 1000 samples.

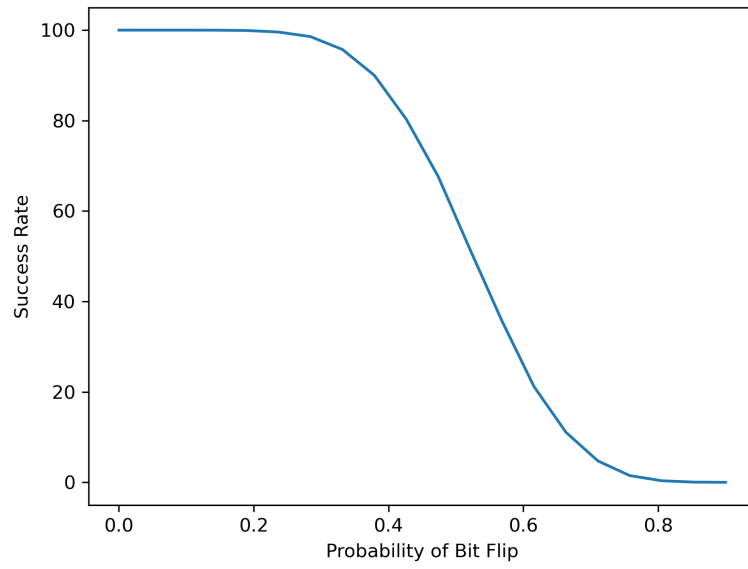

1 $N = 5$

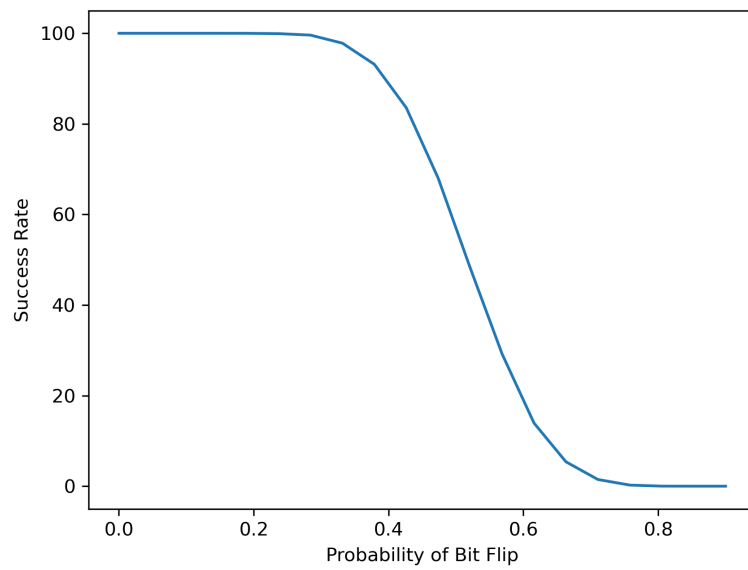

2 $N = 10$

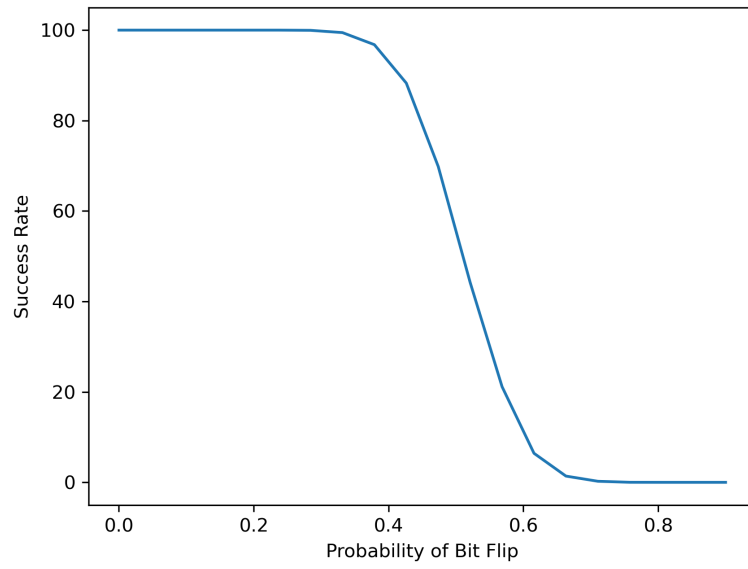

3 $N = 20$

4 $N = 30$

5 $N = 50$

6 $N = 100$
